

## Permasteelisa and Pohl Have Teamed Up

### Feature items:

- Pohl to fabricate stainless steel accents
- Stainless steel pricing is still unstable
- Custom shapes will challenge Pohl fabrication abilities

Pohl and Permasteelisa have teamed up to provide the 430,000 SF of 16 and 20 Gauge stainless steel with a special non-directional finish. Because of the quickly escalating cost of stainless steel, Permasteelisa has authorized Pohl to purchase and store the material until fabrication drawings are ready. Pohl will then fabricate and ship during the spring of 2007 the bulk of the custom column covers and accents that will become part of the unitized curtain wall system. Much of the custom metal panel accents have been designed with Pohl's input to ensure the highest quality product with the emphasis high volume production.
