Fire-Rated and Architectural Glazing Materials from Technical Glass Products now Available in BIM

SNOQUALMIE, Wash., October 28, 2008 - To provide design professionals with greater access to detailed product specification data, all products from Technical Glass Products (TGP) are now available in Building Information Modeling (BIM) through TGP's Web sites: www.fireglass.com, www.tgpamerica.com.

Fireframes® Curtainwall 3-D Image

"BIM gives design professionals unparalleled tools to take their designs to the next level," says Jeff Razwick, vice president of business development for TGP. "With TGP products now in BIM, the design world can more readily learn about the distinct features and specifications of our range of fire-rated and architectural products." BIM product models for fire-rated glazing materials such as FireLite® ceramic glass and Pilkington Pyrostop™ transparent wall panels are available through TGP's fire-rated glass Web site www.fireglass.com. BIM product models for architectural glazing materials such as Pilkington Profilit™ channel glass and SteelBuilt Curtainwall™ Systems are available through TGP's architectural glass Web site www.tgpamerica.com. Both Web sites feature TGP models available in the following file formats: Autodesk® Revit®, Bentley Architecture, Google™ SketchUp, AutoCAD® Model, Autodesk 3D DWG, and 2D Revit Drafting details.

About Technical Glass Products

Technical Glass Products (TGP) is your one source for fire-rated glass and framing systems, along with specialty architectural glass products. The company offers AIA registered continuing education, project consultation, product specifications, CAD drawings and rapid-response quoting. For more information about TGP's products and services, call (800) 426-0279 or visit www.fireglass.com (fire-rated glass) or www.tgpamerica.com (architectural glass).
