Edgetech I.G. to Open UK Manufacturing Facility

Increasing demand for Super Spacer® drives UK expansion

Cambridge, Ohio – May 15, 2007 – Demand for Edgetech's Super Spacer® in the United Kingdom is so high the company is investing in a world-class manufacturing facility. The new \$4.4 million plant in Coventry, England, will be the only dedicated warm edge extrusion facility in the UK.

“Edgetech's UK market growth has been in excess of 300 percent growth in the last three years. With this type of market demand for our product, it was time for Edgetech to take the next step in our commitment to this marketplace” said Mike Hovan, president of Edgetech I.G. “This expansion is symbolic of the growth Edgetech has experienced on an international scale and demonstrates the confidence Super Spacer has achieved globally.”

Edgetech UK was established 11 years ago and has become the premier warm edge supplier in the UK. Just three years ago there were three Super Spacer lines in the UK. By the end of September 2007, there will be 17 fully-automated and eight semi-automated production lines installed and commissioned. Each line is capable of producing between 500 – 1,000 units per day on a single eight hour shift with minimum man power.

According to Andy Jones, managing director of Edgetech UK, "I've seen first hand the changes in the UK market over the last few years. There are an increasing number of companies that see the future as warm edge technology and are investing in Super Spacer machinery to be able to offer the best. Our customers are prepared to invest in the future of the industry, and so are we."

The new Edgetech UK facility will be operational in the summer of 2007 following a three day celebration. More information to come at a later date.

Edgetech will continue to supply global demand from its 476,000 square foot headquarters in Cambridge, Ohio.

Edgetech I.G. Inc., a world leader in insulating glass technology, produces Super Spacer® – the world's only TrueWARM®, all-foam, NO-Metal edge seal product line that provides maximum condensation resistance, durability and energy performance.
