

## **Media Release**

### **FeneVision<sup>®</sup> goes Glass**

Glass processors seeking an integrated and proven ERP solution specific for their industry now have one in FeneVision<sup>®</sup> Glass. FeneTech, Inc., provider of FeneVision intelligent software manufacturing solutions for window, door and sunroom manufacturing, launched this spring the solution for glass fabrication companies.

“Glass processors looking for an integrated and competitive application that enables them to improve speed, quality, margins and service will find it in FeneVision Glass,” said Ron Crawl, FeneTech president. “We’ve built on the successful performance of FeneVision in nearly 100 window, door and sunroom companies and our work with glass fabricators during the past decade to engineer proven capabilities into FeneVision Glass.”

FeneTech has been voted by readers of leading trade magazines as the number one industry software solutions supplier for customer satisfaction, service and support.

FeneVision Glass is a completely integrated software solution for managing and streamlining all processes of a glass processing company, Crawl said. It delivers all necessary ERP functions from start to finish, including quoting, order entry, capacity planning, purchasing, tracking, production scheduling, production control, dynamic optimization systems, CNC control of machinery, inventory control and invoicing.

The Microsoft<sup>®</sup> SQL Server-based solution also features a powerful web-based information center, web-based order entry and order status tracking for customers and dealers. Unlike other systems, FeneVision Glass uses a single database rather than require multiple databases with individual interfaces.

“We built our business providing customers with comprehensive customer support, service and training before, during and after implementation,” Crawl said. “Our FeneVision Glass customers are taking advantage of these resources to move their businesses forward smoothly.”

FeneTech, Inc., is based in Aurora, Ohio. The company provides and supports integrated and intelligent manufacturing software solutions for window, door, sunroom and glass processing applications. For more information, contact Ron Crawl at 330-995-2830 or visit [www.fenetech.com](http://www.fenetech.com).
