GANA'S RELEASES 18TH GLASS INFORMATIONAL BULLETIN

(TOPEKA) - The Glass Association of North America (GANA) today announced the release of its 18th Glass Informational Bulletin (GIB), a series of educational documents available to the industry as a free download on their website. Titled *Quench Patterns in Heat-Treated Architectural Glass*, the GIB defines quench (or sometimes called "strain") patterns, and the conditions that may create them.

"This GIB answers a common question we receive about patterns that sometimes appear in glass in situational lighting and polarity conditions," said Ashley Charest, GANA's Account Executive. "2008 will be a great year for information from GANA. This GIB is only the first of several to come from the organization this year."

Since their original creation, GANA's Glass Information Bulletins have been downloaded over a quarter million times from the website at www.glasswebsite.com. Visitors to the site's TechCenter will be able to add this GIB to their library beginning today.
