Auburn Hills, Mich. — SunGuard® advanced architectural glass by Guardian Industries now offers architects and designers five new performance and appearance glass options by combining its Guardian CrystalGray® float glass with the latest SunGuard coatings.

With SunGuard CrystalGray, architects can:

- Achieve a more neutral appearance than with typical gray and blue tinted float glass
- Reduce outdoor reflectance and glare
- Lower the solar heat gain coefficient by 20 percent compared to coatings on clear glass
- Meet design – and LEED credit -- requirements

SunGuard CrystalGray is available in five combinations: SuperNeutral 68 on CrystalGray, SuperNeutral 54 on CrystalGray, AG 50 on CrystalGray, AG 43 on CrystalGray, Royal Blue 40 on CrystalGray.

“These are our best performing low-E coatings in terms of energy savings and the most popular appearance options,” said Chris Dolan, Guardian director of commercial glass programs. “SunGuard CrystalGray from Guardian gives architects the freedom to realize their vision of a more neutral glass appearance without sacrificing energy performance.”

SunGuard AG 43 on CrystalGray on the Armel-Leftwich Visitor Center, US Naval Academy, Annapolis, Maryland.

Guardian SunGuard Select® Fabricator for the project was J.E. Berkowitz L.P., Pedricktown, NJ; the glazing contractor was Anco Inc., Stevensville, MD
