**Guardian EcoGuard Solar Boost-LP Laminated Paraboli403(L6 0.897 0 Td [ca]1**

EcoGuard Solar Boost-LP has also been extensively field tested for proven durability and validated using numerous accelerated test protocols. It has passed over 10 years equivalent of Arizona EMMAQUA® (Equatorial Mount with Mirrors for Acceleration with Water) testing and a failure point in 85 deg C /85% Rh exposure has not been found. The combined glass and PVB layers provide superior rigidity and durability compared to traditional monolithic glass systems. The laminated construction also results in optimum damping, wind resistance and reduction of subsequent field component damage.

“We are pleased that NREL’s research shows what we have been saying all along – that EcoGuard Solar Boost Laminated Panels outperform 4mm monolithic reflector panels,” said Scott Thomsen, Group Vice President of North American Flat Glass Operations.

Members of Guardian Industries’ solar energy products team are at the CSP Summit this week in San Francisco to discuss Guardian’s latest solar technology and products, as well as share the recent NREL results.

While at the show, Michael Magdich, Guardian’s general manager of the solar-CSP division, participated in a forum Thursday to discuss ways to increase cost efficiencies in the solar industry.

A global manufacturer of high-quality glass for more than 75 years, Guardian has comprehensive product and technology pipelines that consistently translate into high-performance glass products for a wide range of industries. Guardian is well positioned to provide the solar market with superior solutions that address current and future market needs.
