## **New Facility for Mobile Ergonomic Handler Robot production**

Arlington Equipment Company announced the opening of its new facility in Queensbury, New York, on October 1, 2008. This new facility is dedicated to the assembly, testing and shipping of the AB and GFB Series Mobile Ergonomic handling machines which are built exclusively for the Glass Industry.

**A<sup>E</sup>C<sup>O</sup>** spokesman, Bob Mirel announced, "This dedicated facility is required to satisfy the overwhelming demand for these machines. We are confident that we can better serve our glass industry customers with reduced delivery lead times that this modern, dedicated facility will provide.

Ken Buck has been appointed General Manager and has configured the operation to enable flexible production schedules assuring timely deliveries of the custom built glass handling robots.

A staff of designers and technicians, cross-trained on the base machines and many options will work with specially designed assembly fixtures and tooling to support our customers' project schedules.

A separate simulation area enables **A<sup>E</sup>C<sup>O</sup>** to specify equipment and installation procedures for its customers to assure safe, efficient project performance long before the start of the actual glass installation project.

**A<sup>E</sup>C<sup>O</sup>** invites glass industry professionals to visit the new facility and to test drive its Mobile Ergonomic Glass Handling machines.
