Linetec Offers “Introduction to Coatings” Online, On-Demand as an AIA/CES Program

Wausau, Wis. -- Linetec’s online Architectural Resource Center offers paint and anodize finish specifications, green building considerations, project inspirations, new applications, and AIA continuing education. All can be accessed on-demand at www.linetec.com <<http://www.linetec.com>>

As an AIA/CES Registered Provider, Linetec’s “Introduction to Coatings: Field Performance and the Application Process” program helps architects, contractors and other members of the building community better understand field performance and the application process of architectural coatings. The program explains the anodizing, painting, and powder coating processes, describes specifications, and compares the field performance of architectural finishes.

Architects completing the easy-to-use, self-paced course will earn one learning unit toward their health, safety and welfare continuing education credits. “Fitting into architects’ busy schedules, the self-guided program is available at their convenience 24 hours per day, 365 days per year. And, the content remains online for future reference by all,” says Jon Close, Linetec’s director of commercial and architectural sales.

For continued reference, Linetec’s online Architectural Resource Center presents downloadable specification language for its 50% and 70% Kynar 500®, baked enamel, and Class I and Class II anodize finishes. Additional information on environmentally friendly coatings can be located in the section on green building explaining how Linetec’s finishes and thermal barrier systems can contribute to projects seeking certification under the LEED® Green Building Rating System™.

For in-person learning opportunities, Linetec continues to offer its AIA/CES program and customized presentations for architectural firms and building teams. **To request a presentation with a Linetec representative, please contact Tammy Schroeder at sales@linetec.com or 888-717-1472.**

Linetec is one of the nation’s largest paint and anodize finishers, and the largest independent architectural finisher. Located in Wisconsin, the company serves customers across the country through a national trucking network and offers 500,000-square-feet of capacity for finishing such products as aluminum windows, wall systems, doors, hardware and other architectural metal components, as well as automotive, marine and manufactured consumer goods.
