PGC International Announces May Webinar on Window Films

(TOPEKA) - The Protective Glazing Council (PGC) International today announced the next in a monthly webinar series for architects, building owners, specifiers, glazing contractors and others in the architectural community. The free monthly webinar series focuses on various industry topics and runs an hour in length.

Scheduled for the last Friday of each month, the next webinar will feature Cindy Rotton of CPFilms. It will give in-depth information and techniques for testing and specifying window films for safety and security requirements, as well as for the protection of electronic assets.

“The use of window film for protective glazing is an excellent solution for glazing contractors and building owners, particularly for retrofit construction,” said Brian Pitman, Director of Marketing and Communications for the organization. “Cindy’s presentation will focus on how window films can reduce personal injury and property damage. Furthermore, the protection of electronic assets using window film has become a vital focus of many companies in this high tech age of corporate espionage.”

Rotton’s presentation kicks off at Noon EDT, May 29th. To learn more and register free for this presentation, please visit the PGC International website at www.protectiveglazing.org/webinar.

###

The Protective Glazing Council (PGC) International represents manufacturers of protective glazing products and systems, suppliers to these manufacturers, consultants and testing organizations. The Association was organized to provide support to government and industry in the development of standards and specifications, as well as use of protective glazing products, for blast resistance, bullet resistance, and main force attack.
