RE: Press Release for the Launch of New Corporate Website

United Glass Corporation (UGC) is proud to introduce its new website www.ugcinfo.com. The new site is designed to be more viewer-friendly while containing all the important information about UGC's wide range of products and services, vital technical/code information, as well as a glimpse into how they are structured to better service their clients' needs. UGC is one of the leading, independent fabricators and processors of value-added glass products servicing commercial construction end markets in the Eastern United States. The company provides value-added fabrication services to transform raw, flat glass into a variety of precision, energy-saving and technical products. UGC's goal is to yield world-class service, on-time delivery and produce quality products while exceeding clients' expectations.

The UGC "family of companies" consists of six operating facilities, making it one of the largest fabricators in North America that focuses on local and regional service east of the Mississippi while completing projects from coast to coast. Our top management team has over 200 years of combined industry experience. Working with state-of-the-art CNC fully automated equipment, along with technologically advanced convection ovens to produce some of the flattest and most distortion-free glass available. Our staff works closely with customers to assemble the "complete package" of support hardware. The vast majority of the company's service offerings result in highly customized, "made-to-order" products to meet customer specifications.

UGC has sustained the industry's respect as the source for the most demanding projects supporting the stringent requirements of today's architectural/building community. With this motivation, UGC has been selected for some of the most prestigious buildings in the country. Projects requiring multiple processes are common practice due to UGC's ongoing advancements in maintaining the most technologically advanced facilities and fabrication centers, employing cutting-edge resources and equipment.

For more information on UGC's products, services and full capabilities, please contact our website at www.ugcinfo.com.
