

WHEATON & SPRAGUE ENGINEERING FULL 3D IMPLEMENTATION

(Stow, OH) Wheaton & Sprague Engineering of Stow, OH., an engineering and consulting firm specializing in the building envelope, the primary building structure and building forensic services announces the completion of Autodesk Certified Training utilizing 3D tools available in AutoCAD for the firm's design and drafting personnel.

AutoCAD is a software program manufactured by Autodesk, the world leader in design software to the architectural and engineering community. Utilization of the 3D tools in AutoCAD allows Architectural and Engineering firms to add depth and perspective to two dimensional ideas, enabling them to visualize, analyze and experience ideas before they become real. Implementation of 3D tools will allow the firm to more completely visualize and follow seal lines, accurately determine proper joinery for complex intersections, visualize aesthetic problems before assembly of parts, and provide early detection of interference problems to their clients.

With the completion of 3D training, Wheaton & Sprague intends to increase their service offerings, increase productivity, and design more efficiently for their clients. Wheaton & Sprague Engineering currently utilizes AutoCAD 2009 for all of their design and drafting services.
