FOR IMMEDIATE RELEASE

Craftsman Fabricated Glass, Ltd Announces Ground Breaking For New Laminated Glass Production Line

Increasing market demands brought on by evolving building codes and construction trends call for high quality laminated architectural glass. The new glass laminating line will exemplify and extend the array of quality commercial and residential products Craftsman provides. Craftsman is an industry leader in the fabrication of all flat glass products. Maintaining an outstanding reputation Craftsman continues taking the necessary measures to meet today's demands by adding this new glass laminating line.

The new state-of-the-art line features advanced robotics and automation to reduce glass handling, thus insuring superior quality. Additionally, the line will be equipped with a digital PVB optimizer and upper level PVB selector and storage system. The Autoclave will have a capacity of 102" x 196" as well as full heat-soak capabilities.

"We wanted to expand our product offerings to include Impact Resistant, Sound Control, Decorative, Blast Resistant, as well as High Performance laminated glass" says Bob Larson, Vice President of Sales and Marketing. "Our goal continues to be to offer our customers the products that they need and the quality that they expect."

The new laminated glass line is scheduled to be ready for full production in September '07.
