NEW PRODUCT IDEA AVAILABLE

FOR IMMEDIATE RELEASE

"PANE PRO-TECT GLAZIERS' TOOL" Glaziers' Enhanced Glass Carrier
Invented

PITTSBURGH...InventHelp announces that two of its clients, inventors from Deltona, Fla., have designed a glaziers' tool that would prevent large, heavy panes of glass from bending and possibly breaking during transport.

The PANE PRO-TECT GLAZIERS' TOOL could improve safety and save time and labor as glaziers transport heavy glass panes. This invention is producible in sizes to accommodate glass panes of different sizes. Also, the PANE PRO-TECT GLAZIERS' TOOL may be used to carry large, heavy sections of tile or marble.

The idea for the PANE PRO-TECT GLAZIERS' TOOL was inspired by the work background of one of the inventors, a glazier. "I work in the glass business, and I'm always looking for a way to pick up and move glass that is less risky for both the user and the product," he said.

The original design was submitted to the Orlando office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 06-ORD-515, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
