Truseal Technologies, Inc. earns ISO 9001:2000 recertification

Solon, OH – January 8, 2007 – Truseal Technologies, Inc., a world leader in warm edge spacer systems for insulating glass (IG), recently completed its ISO 9001:2000 triennial audit, maintaining the highest manufacturing quality standard at its Barbourville, Ky., facility.

Truseal manufactures its Dura platform of warm-edge spacer products in Barbourville, including Duralite™, a new no-metal, highly efficient spacer. Duralite uses proven components, sealants and desiccants to produce superior thermal and durability performance. Since the Dura platform was introduced in 2001, Duralite is the company's most significant insulating glass product innovation.

The globally recognized International Organization for Standardization's (ISO) 9001 registration serves as the international reference for quality requirements in business-to-business dealings. Truseal continues to fulfill all requirements of the ISO 9001:2000 standard, demonstrating its ability to consistently provide warm-edge spacer products that aim to enhance customer satisfaction.

“The importance we place on adhering to ISO 9001 standards is a testament to our unwavering commitment to quality, customer satisfaction and continuous improvement

for every foot of spacer that we produce,” said Lee Burroughs, Truseal’s vice president of manufacturing.

Truseal first became ISO 9001:2000 certified in 2003. This most recent recertification is valid through 2009. Truseal achieved ISO 9002 certification in 1999.

About Truseal Technologies, Inc.

Truseal Technologies, Inc., headquartered in Solon, Ohio, and part of the Quanex Corporation Building Products Group, is one of the world’s leading manufacturers and marketers of insulating glass products and systems. Truseal produces superior IG warm edge spacer systems with consistent after-sales service and a warranty program for qualified window fabricators. In addition, Truseal practices lean manufacturing that provides customers with value and efficiency in their window fabrication operations.
